Development Machine

For this course

Learning Objectives:

- Machine configuration
- Visual Studio Code

raj@acloudfan.com

@acloudfan

<http://ACloudFan.com>

Windows
(No official word)

Ubuntu Linux
14.04 / 16.04 LTS

Mac OS 10.12

<http://www.ACloudFan.com>

Minimum 4GB RAM, 8GB RAM Ideal

Decent internet connection

<https://code.visualstudio.com/download>

Download Visual Studio Code

Free and open source. Integrated Git, debugging and extensions.

↓ Windows

Windows 7, 8, 10

.zip | 32 bit versions

↓ .deb

Debian, Ubuntu

↓ .rpm

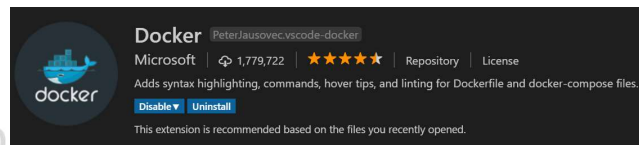

Red Hat, Fedora, SUSE

.tar.gz | 32 bit versions

↓ Mac

macOS 10.9+

Native Vs Virtual Machine

For setting Hyperledger Dev Environment

Learning Objectives:

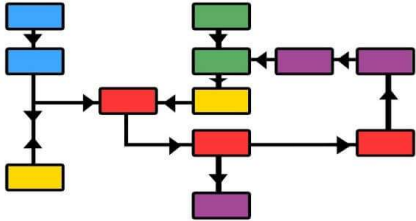

- Choice Development Environment

raj@acloudfan.com

 @acloudfan

<http://ACloudFan.com>

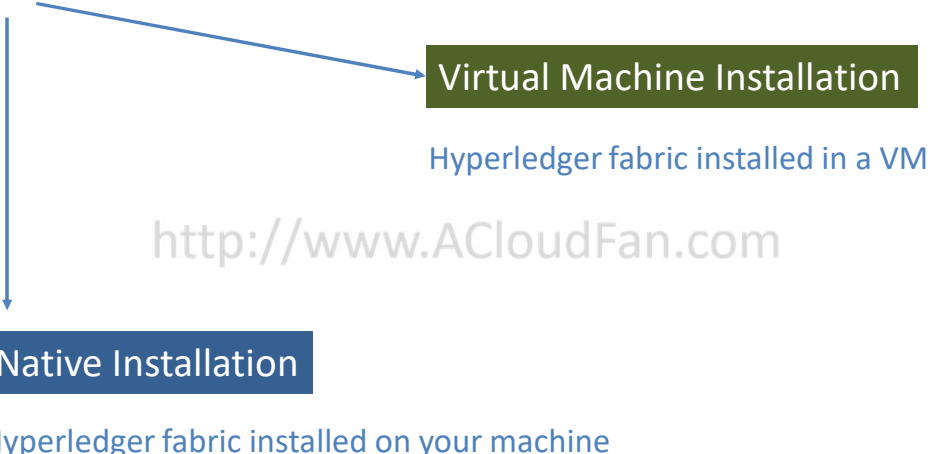

Dependency Hell

“ Frustration of some software users who have installed software packages which have dependencies on specific versions of other software packages

www.ACloudFan.com

CHOICES

Virtual Machine Installation
Hyperledger fabric installed in a VM

Native Installation
Hyperledger fabric installed on your machine

http://www.ACloudFan.com

CHOICES

Native Installation

Time taken to setup

Manual installation

Version clashes

Experience with setup

Virtual Machine Installation

Fast compared to native

Automated installation

Self contained | Managed internally

Easy cleanup

Hides the details

Resource usage

CHOICES

Native Installation

Supported Linux

Virtual Machine Installation

Start with VM based setup & later do native

My suggestions!

Dev Setup Overview (VM)

Learning Objectives:

- Virtualization software

- High level setup

raj@acloudfan.com

 @acloudfan

<http://ACloudFan.com>

Virtualization

Software simulation of the physical hardware

Virtualization

Software simulation of the physical hardware

Hypervisor:

The virtualization system that creates and runs virtual machines.

**VM Setup**

Log into VM for all tool execution

Mixed Mode Setup

Mixed Mode Setup

Benefit:

Same experience as native install

No need to log into VM

My suggestions!

“

Vagrant is a tool for building and managing virtual machine environments in a single workflow

<http://www.ACloudFan.com>

- CLI tool for managing virtual machines
- Workflow automated by way of

Virtual Machine Setup

- Installation

<http://www.ACloudFan.com>

- Installation
- Common commands

raj@aclooudfan.com

 @aclooudfan

<http://ACloudFan.com>

- Windows 10 PRO users with Hyper-V enabled do not need to install Virtual Box
- If you already have Hypervisor on your machine. You don't need to install virtual box as long as

1. your virtualization software is supported by Vagrant
2. ubuntu/trusty64 box is available for it

Installation

STEP ①

- Check if its already installed on your machine

STEP ②

- Download & Install

<https://www.virtualbox.org/wiki/Downloads>

Installation

<https://www.vagrantup.com/docs/installation/>

Clone the Vagrant Repository

<https://github.com/acloudfan/HLF-Vagrant-Dev-Setup.git>

<http://www.ACloudFan.com>

```
>_ git clone ...Repository Link...
```

Crash Course

<https://www.vagrantup.com/intro/getting-started/>

```
>_ vagrant up
```

 Starts the VM

```
>_ vagrant halt
```

 Gracefully shuts down the VM

```
>_ vagrant ssh
```

 Log into the VM

```
>_ vagrant destroy
```

 Deletes the VM

Hyperledger Fabric Installation

- Installation

raj@acloudfan.com

@acloudfan

<http://Acloudfan.com>

Pre-Req Installation

<http://www.fabric.tools.com>

Fabric Tools Installation

Post Install Steps

Pre-Req Installation

15 – 30 minutes

Sets up all pre-requisites on VM

python™

curl://

Fabric Tools Installation

< 2 minutes

Installs the fabric dev tools | environment

Pre-Req Installation

STEP ①

vagrant up

STEP ②

- Execute the pre-requisites install script

vagrant ssh

\$./scripts/install-prereqs.sh

\$ logout

Fabric Tools Installation

STEP ①

vagrant ssh

STEP ②

- Execute the fabric-tools install script

\$./scripts/install-fabric-tools.sh

\$./scripts/install-composer.sh

Hyperledger Fabric Post Install Steps

Post Install Steps

raj@acloudfan.com

 @acloudfan

<http://ACloudFan.com>

Post Install Steps

Download fabric docker images

STEP ①

vagrant ssh

STEP ②

- Execute script for downloading fabric docker images

\$./downloadFabric.sh

Post Install Steps

Install Peer Admin Card

STEP ①

Setup the utility

```
>_ cd util
```

```
>_ npm install
```

STEP ②

Create the PeerAdmin Card

```
>_ node devutil.js
```

- Docker commands used against Docker daemon in VM

```
>_ docker ps
```

```
>_ docker images
```

Post Install Steps

Setup Environment Variable for

- Add these to your *.profile*

<http://www.ACloudFan.com>

```
export DOCKER_HOST=tcp://localhost:2375
```

```
unset DOCKER_TLS_VERIFY
```

Post Install Steps

Setup Environment Variable for

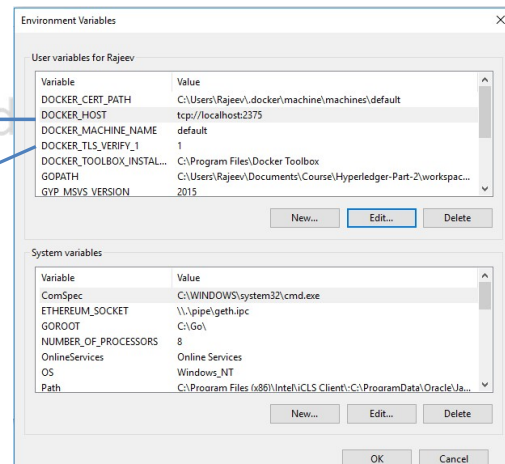

- Use the control-panel

`DOCKER_HOST=tcp://localhost:2375`

`DOCKER_TLS_VERIFY`

Rename or Remove

- Validation

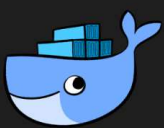

<http://www.ACloudFan.com>

`docker images`

- Some of the Docker Extensions on VSC DO NOT Work
- Use Docker commands on host machine
- Use this extension: There are some know issues with it ☹️

Docker Explorer formulahendry.docker-explorer
Jun Han | 45,479 | ★★★★★ | Repository | License
Manage Docker Containers, Docker Images, Docker Hub and Azure Container Registry
Enable Uninstall

Validation Dev Environment setup

vagrant **ssh**

<http://www.ACloudFan.com>

`$/startFabric.sh`

docker **ps**

`$/stopFabric.sh`

- Cross platform virtualization software
 - Launch Virtual Machines – different OS

Docker Installation

Learning Objectives:

- Docker installation

PREREQUISITES

Basic understanding of Docker containers & commands
Basic knowledge of Virtual Machines

raj@acloudfan.com

@acloudfan

<http://ACloudFan.com>

Course will cover the basic docker commands
needed for running fabric software
<http://www.ACloudFan.com>

You will not learn Docker in this course!!!

Windows 10 **PRO**

OS X El Capitan 10.11 or higher

Windows 10 **Home**

All other windows version

Older Mac Machines

<https://docs.docker.com/docker-for-mac/install>

Already have Docker on your machine?

```
> docker -v
```

Pre-Requisites

- Docker Engine: Version 17.03 or higher
- Docker-Compose: Version 1.8 or higher
- Node: 6.x (note versions 7 and higher are not supported)
- npm: v3.x or v5.x
- git: 2.9.x or higher
- Python: 2.7.x

Stable channel

This installer is fully baked and tested. This is the best channel to use if you want a reliable platform to work with. These releases follow the Docker Engine stable releases.

On this channel, you can select whether to send usage statistics and other data.

Stable builds are released once per quarter.

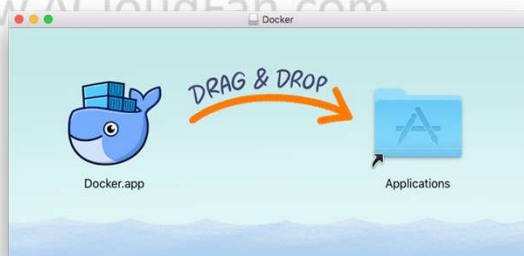

[Get Docker for Mac \(Stable\)](#)

Edge channel

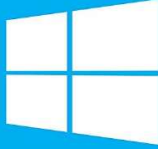

This installer provides the latest Edge release of Docker for Mac and Engine, and typically offers new features in development. Use this channel if you want to get experimental features faster, and can weather some instability and bugs. We collect all usage data on Edge releases across the board.

Edge builds are released once per month.

[Get Docker for Mac \(Edge\)](#)
